

Seminar “Stochastic Modeling – Theory and Reality from an Actuarial Perspective”

23-25 April 2012 | Madrid / Spain

organised by the EAA - European Actuarial Academy GmbH in cooperation with the International Actuarial Association (IAA) and the Instituto de Actuarios Espanoles

1. Introduction

As recently as the mid-1990s, most models used in financial analysis of insurance were deterministic. Based on sets of static parameters and assumptions, these models largely ignored random fluctuations that were likely to occur. Sensitivity analyses were performed but were generally limited to a fixed number of defined scenarios. This deterministic approach is rapidly being replaced by stochastic modeling that can better inform insurers on pricing, financial planning, and capital assessment strategies. Huge advancements in computing power have made it possible for actuaries and financial planners to better understand the increasingly complex risk profiles of insurers' evolving product design.

This seminar is based on the book “Stochastic Modeling – Theory and Reality from an Actuarial Perspective (copyright © 2010 International Actuarial Association) which intends to provide actuaries with a comprehensive resource that details current stochastic methods, provides background on the stochastic technique as well as their advantages and disadvantages.

2. Participants

The seminar is suited for actuaries, actuarial students and other professionals involved and interested in actuarial modeling in life and non-life.

sponsored by:

3. Purpose and Nature

The seminar will cover a wide range of topics presented in the book “Stochastic Modeling – Theory and Reality from an Actuarial Perspective”. The first day of the seminar will focus on risk management and actuarial modeling issues. The day will start with an introduction to stochastic modeling, including a practical discussion of when stochastic models are appropriate or necessary and when they may not be. The day continues with an in-depth discussion of the various techniques and models that are commonly used in stochastic projections.

The second day (and the morning of the third day) of the seminar will be split into two separate sessions, one that will focus on life actuarial issues and the other will focus on non-life actuarial issues. In the life session, the lecturers will present stochastic models for interest rates, mortality, and morbidity, among other risk factors, and will demonstrate how these models can be developed, calibrated, implemented and reviewed. This will also involve a detailed case study (or case studies) illustrating the use of stochastic models in life and health business.

In the non-life sessions, the lecturers will present an overview of stochastic models, including triangle based, frequency / severity, catastrophe financial and dynamic risk models, and will demonstrate how these models can be developed, calibrated, implemented and reviewed. Building on this overview, the lecturers will then take you through a deeper look at the Mack and ODP Bootstrap models and discuss the calculation of one-year reserving risk. As with the life session, the early sessions will focus on the technical aspects of stochastic models and the later sessions will be a case study format intended to demonstrate the practical application of these models.

The third day will continue the separate life and non-life sessions in the first session. In the later sessions we will again have a joint session to discuss a case study on combining results of both life and non-life companies in a group.

All participants will receive a copy of the book “Stochastic Modeling – Theory and Reality from an Actuarial Perspective” which is presented by the International Actuarial Association (IAA) in collaboration with Milliman. A guide for practitioners interested in understanding this important emerging field, this book presents the mathematical and statistical framework necessary to develop stochastic models in any setting (insurance or otherwise). Sufficient mathematical detail is presented but no advanced background in mathematics or statistics is required.

4. Lecturers

Andrew H. Dalton

Is an Actuary in Milliman’s Philadelphia office and a primary author contributing to Life sections of the book “Stochastic Modeling – Theory and Reality from an Actuarial Perspective”. Andrew’s professional experience includes work on actuarial appraisals for mergers and acquisitions, as set and liability analysis, cash flow testing, and economic capital for life and health companies. Andrew is a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. He holds a Masters Degree in Business Administration, concentrating in Finance and Statistics, from the Leonard N. Stern School of Business of New York University.

sponsored by:

Mark R. Shapland

Is a Consulting Actuary in Milliman's Atlanta office and a primary author contributing to Non-Life sections of the book. Mark's area of expertise is non-life insurance, particularly pricing (personal and commercial lines), reserving (including reserve variability and asbestos liabilities), individual risk and association-type dividend plans and premium rates for large accounts, reinsurance, data management, and dynamic risk modeling. Mark has international experience, having worked in Europe for four years, as well as shorter assignments in many other countries. He also has extensive experience in the development of actuarial software tools and is the lead actuary for the Milliman Reserve Variability software development team. Mark is a Fellow of the Casualty Actuarial Society, an Associate of the Society of Actuaries and a Member of the American Academy of Actuaries.

Jeffrey A. Courchene

Jeff's area of expertise is international property and casualty insurance: particularly reserving, reinsurance analysis, mergers and acquisitions (M&A) activity, advanced pricing techniques, and dynamic financial modeling. Jeff has extensive experience in matters related to both personal and commercial lines of business in the United States, United Kingdom, Middle East, and continental Europe. His experience includes leading the review of reserves of various European (re)insurers as part of due diligence assignments, leading dynamic financial modeling projects both in the United States and Europe, and contributing to Milliman internal Solvency II working party as an author and presenter. Jeff is a Fellow of the Casualty Actuarial Society and a Member of the American Academy of Actuaries.

Dr. Michael Leitschkis

Michael specializes in modelling financial and insurance risks of life insurance. He advises his clients on various aspects of risk modelling and risk management in the context of Solvency II. Michael has several years of experience in the German market, with his work involving Solvency II implementation, industrialization and model change processes, calculation and review of MCEV, and risk aggregation. Michael has presented several talks to German actuarial conventions, and acts as a lecturer on risk modelling within the German CERA syllabus.

Dr. Mario Hoerig

Mario specializes in modelling financial and insurance risks of life insurance. He advises his clients on risk aggregation, asset modelling, Solvency II implementation, and calculation of MCEV. Mario has given several talks on risk aggregation techniques such as Least Squares Monte Carlo at actuarial seminars.

5. Language

The language of the seminar will be English.

6. Preliminary Programme

Monday, 23 April 2012

Joint sessions

08.45-09.00	Registration
09.00	Welcome and opening of day 1
09.00-10.30	lecture/workshop
10.30-10.45	Coffee Break
10.45-12.30	lecture/workshop
12.30-13.30	Lunch
13.30-15.00	lecture/workshop
15.00-15.15	Coffee Break
15.15-17.00	lecture/workshop
19.00	Dinner

Tuesday, 24 April 2012

Parallel sessions	Life	Non-Life
09.00	Opening of day 2	Opening of day 2
09.00-10.30	lecture/workshop	lecture/workshop
10.30-10.45	Coffee Break	
10.45-12.30	lecture/workshop	lecture/workshop
12.30-13.30	Lunch	
13.30-15.00	lecture/workshop	lecture/workshop
15.00-15.15	Coffee Break	
15.15-17.00	lecture/workshop	lecture/workshop

Wednesday, 25 April 2012

Parallel sessions	Life	Non-Life
09.00	Opening of day 2	Opening of day 2
09.00-10.30	lecture/workshop	lecture/workshop
10.30-10.45	Coffee Break	
Joint sessions		
10.45-12.30	lecture/workshop	
12.30-12.45	Concluding remarks	
12.45-13.45	Lunch	

Attendees are encouraged to bring a laptop computer with Microsoft Excel installed.

7. Fees & Registration

Please register for the seminar as soon as possible because of the expected demand. If there are more persons interested in this seminar than places available we will give priority to the registrations received first. Please send your registration as soon as possible by using our online registration form at www.actuarial-academy.com.

Your registration is binding. Cancellation is only possible up to 4 weeks before the first day of seminar. If you cancel at a later date, the full seminar fee is due. You may appoint someone to take your place, but must notify us in advance. EAA has the right to cancel the event if the minimum number of participants is not reached.

sponsored by:

INTERNATIONAL ACTUARIAL ASSOCIATION
ASSOCIATION ACTUARIELLE INTERNATIONALE

European Actuarial Academy
developing actuaries

Please always give your invoice number when you effect payment. Bank charges are to be borne by the participant. We will send you an invoice, please allow a few days for handling.

Your early-bird registration fee is € 870.00 until 5 March 2012 plus 18 % VAT. After this date the fee will be €970.00 plus 18 % VAT.

8. Accommodation

more information will follow

9. CPD

For this seminar, the following CPD points are available under the CPD scheme of the relevant national actuarial association:

Austria: 16 points

Bulgaria: 12 points

Czechia: 2-3 points (individual accreditation)

Estonia: 16 hours

Germany: 16 hours

Italy: approx. 4 credits (GdLA individual accreditation)

Netherlands: approx. 14 PE-Points (individual accreditation)

Russia: 40 points

Slovakia: 8 points

Switzerland: 15 points

No responsibility is taken for the accuracy of this information.
